AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended): A system for mitigating line-edge roughness on a semiconductor device, comprising:
a monitoring component that monitors information associated with at least one critical dimension and line-edge roughness on a photoresist;
a non-lithographic shrink component that facilitates selectively mitigating line-edge roughness; and
a trim etch component that facilitates selectively achieving a target satisfying the at least one critical dimension specification.
2. (Cancelled)
3. (Currently amended): The system of claim 1~~[[2]]~~, the monitoring component comprising at least one of a scatterometry system and a Scanning Electron Microscopy system.
4. (Currently amended): The system of claim 1, further comprising a processor that processes data associated with the at least one ~~of~~ critical dimension and line-edge roughness on a photoresist.
5. (Currently amended): The system of claim 4, the processor comprising an artificial intelligence component that facilitates making inferences regarding ~~at least one of~~ mitigating line-edge roughness and achieving ~~target~~the at least one critical dimension specification on a photoresist.

10/645,364

H1902

6. (Original): The system of claim 5, the artificial intelligence component comprising at least one of a support vector machine, a neural network, an expert system, a Bayesian belief network, fuzzy logic, and a data fusion engine.
7. (Currently amended): The system of claim 1, further comprising a memory component that stores data associated with ~~at least one of mitigating line-edge roughness and achieving target~~the at least one critical dimension specification on a photoresist.
8. (Original): The system of claim 7, the memory component comprising at least one of volatile and non-volatile memory.
9. (Currently amended): The system of claim 1, the non-lithographic shrink component comprising at least one of a thermal ~~reflow~~-component, a chemical a Resolution Enhancement Lithography Assisted by Chemical Shrink (RELACSTM) component, and a ~~Shrink Assist Film for Enhanced Resolution (SAFER)~~ shrink enhancement component.
10. (Original): A method for mitigating line-edge roughness on a semiconductor device, comprising:
determining whether line-edge roughness is extant on a patterned photoresist;
employing a non-lithographic shrink technique to mitigate line-edge roughness; and
employing a trim etch technique to compensate for any increase in critical dimension between lines on a photoresist.
11. (Previously presented): The method of claim 10, further comprising processing information associated with photoresist line status.
12. (Previously presented): The method of claim 10, further comprising making inferences regarding photoresist line status.

10/645,364

H1902

13. (Previously presented): The method of claim 10, further comprising storing information associated with photoresist line status.
14. (Previously presented): The method of claim 10, the presence of line-edge roughness is determined *via* employing at least one of a scatterometry technique and Scanning Electron Microscopy.
15. (Currently amended): The method of claim 10, the non-lithographic shrink technique comprising at least one of a thermal reflow-technique, a chemical Resolution Enhancement Lithography Assisted by Chemical Shrink (RELACS™) technique, an expansion technique and a shrink enhancement Shrink Assist Film for Enhanced Resolution (SAFIER) technique.
16. (Currently amended): The method of claim 10, further comprising generating feedback data that facilitates controlling at least one parameter associated with at least one of LERline-edge roughness mitigation and critical dimension maintenance.
17. (Currently amended): A system for mitigating line-edge roughness on a semiconductor device, comprising:
means for determining critical dimensions and line-edge roughness on a photoresist
means for mitigating line-edge roughness; and
means for ~~trimming~~ removing excess resist material to achieve a target critical dimension.
18. (Original): The system of claim 17, further comprising means for monitoring photoresist line status.
19. (Original): The system of claim 17, further comprising means for processing information associated with photoresist line status.
20. (Original): The system of claim 17, further comprising means for storing information associated with photoresist line status.

10/645,364

H1902

21. (Original): The system of claim 17, further comprising means for making inferences related to photoresist line status.
22. (Currently amended): The system of claim 17, the means for mitigating line-edge roughness comprising means for performing a non-lithographic-shrink technique.
23. (Original): The system of claim 17, the means for trimming excess resist material comprising means for performing a trim etch.
